coderfactory ACADEMY

CODE YOURSELF A NEW FUTURE
SYDNEY | MELBOURNE

Become a Web Developer in 23 Weeks
Fast-track your career with Australia's only accredited coding bootcamp.

Whether you want to upskill, create a start-up, build an app, join a leading tech company, or travel the world as a digital nomad, Coder Factory Academy provides you with the in-demand tools you'll need for a lucrative tech career.

Coder Factory Academy has joined forces with the Academy of Information Technology (AIT) to bring you Australia's first Silicon Valley-style, nationally accredited coding bootcamp.

Our six-month fast-track course offers revolutionary technology education in a collaborative and immersive environment, combined with the backing of the Australian Skills Quality Authority (ASQA) and a nationally accredited Diploma of Software Development.

ENTRY REQUIREMENTS

- Satisfactory completion of Australian Year 12 or Diploma or Certificate IV overseas equivalent
- Interview.

ENGLISH PROFICIENCY REQUIREMENTS

- IELTS 5.5 or equivalent

YOUR SUCCESS IS OUR SUCCESS

Coding bootcamps differ from other coding schools and traditional degrees in significant ways. Here are a few advantages of joining Coder Factory Academy:
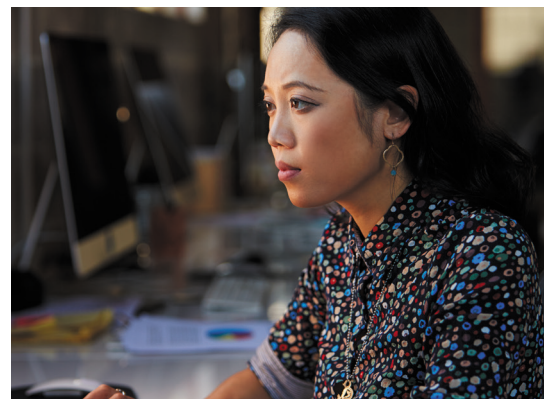

- 23 weeks. All day. Every day. Our full-time course allows for a hands-on, project-based experience. Students work both collaboratively and independently to create impactful solutions for real businesses.

- Practice interview challenges and mentorship by industry experts, combined with a healthy dose of computer science fundamentals, ensures students graduate career-ready.

- Each student participates in a **guaranteed**, unpaid one-month internship in the final term of the course. Gain vital industry connections and real-world experience on a dev team. Determine if you want to work for a start-up, a big corporation, or do your own thing.

- Learn two different technology stacks! A technology stack is a combination of software products and programming languages used to create a web or mobile application. Most bootcamps specialise in one stack, but our program helps students become pros in both Ruby on Rails and the MEAN stack. Graduate well-versed in Ruby and JavaScript, two of the most in-demand programming languages across all industries.

- Curriculum and qualified educators direct from the world's technology epicentre – Silicon Valley – specialise in the most relevant methodologies, languages, and frameworks to help students perfect the skills they need to land that first job.

WOMEN IN TECH SCHOLARSHIP

Coder Factory Academy is passionate about reducing the underrepresentation of women in the tech industry. Two talented women have the opportunity to receive a scholarship covering 80% tuition fees when they commence their studies with us – one scholarship for Sydney Campus and one for Melbourne Campus. Scholarships will be judged on a creative submission.

OUR EXPERTS

Our trained instructors come directly from the tech industry to ensure students learn cutting-edge languages, frameworks, and methodologies. Instructors also provide career guidance, guest speakers, networking opportunities, and interview preparedness challenges throughout the program to ensure students have the support they need to become successfully employed. Using coursework from existing Silicon Valley bootcamps, our teachers specialise in creating an engaging, fun, and hands-on learning experience to prepare our students for rewarding careers.

CAREER PROSPECTS

All students graduate prepared to land a Junior Developer job immediately following the program's completion.

From a **Junior Developer** role, alums can excel to become a:

- Senior Web Developer
- Software Developer
- Software Engineer
- Software Architect
- Product Manager
- Business Analyst
- IT Consultant
- Startup Founder
- CTO
